ABOUT ME

Motivated and focused Software Engineer with a solid foundation in systems programming. Currently pursuing a degree in microprocessor technologies with hands-on experience in research, development, and mentoring roles. Skilled in C/C++, Python and assembly programming. Passionate about solving complex problems. Currently interested in exploring machine learning.

EXPERIENCE

Software Engineer

Self-Employed

2024 – Present

Moscow, Russia

- Developed a utility for automating wholesale sales, streamlining order management and improving operational efficiency for B2B solutions.

Software Engineer

Huawei Russian Research Institute

2023 – Present

Moscow, Russia

- Implemented an LLVM-based Go assembler for the x86/64 and ARM64 architecture.
- Accelerated a highly loaded cloud service by 1.5% by optimizing the Go standard library for the target architecture.
- Developed a foreign function interface (FFI) between Go and a proprietary object-oriented language.
- Conducted research on improving code generation with large language models (LLM) and implemented findings in practice.

Mentor of Introduction to Systems Programming course

Moscow Institute of Physics and Technology

2023 – 2024

Moscow, Russia

- Mentored students through the course, conducted code reviews.

Intern

Cyberprotect

2023

Moscow, Russia

- Investigation of traffic interception mechanisms in os linux and their implementation.

EDUCATION

Bachelor's degree in Radio Engineering and Computer Science

Moscow Institute of Physics and Technology (MIPT)

2021 – 2025 (Expected)

Moscow, Russia

Department of Microprocessor Technologies in Intelligent Control Systems

Ranked in the top 20 students in GPA.

SKILLS

C/C++

Python

x86/ARM Assembler

Git

Gdb

CMake

Linux

LLVM

LLM

SOFT SKILLS

Motivated

Focused

Team Player

Adaptive

Communicative

PROJECTS

Social Network for Student Communication

Developed social network for university students, enabling communication and event coordination using the PostgreSQL and Flutter framework.

Intersection of Triangles in 3D Space on Vulkan

Implemented an efficient algorithm for calculating the intersection of triangles in a 3D space using the Vulkan.hpp API. Focused on performance and visualization in real-time graphics rendering.

Custom Programming Language Compiler

Designed and built a compiler for a custom programming language with support for basic control structures, variables, strings, and I/O operations. Implemented code generation and optimization.

Processor Simulator for Custom Architecture

Created a simulator for a custom processor architecture, simulating instruction execution and memory access.

Raytracer

Developed a raytracing engine from scratch to render realistic 3D scenes. Focused on enhancing the realism of light reflection, refraction, and shadows.

LANGUAGES

- **Russian** – Native
- **English** – Technical for reading documentation and communicating via chat.
